

Also for the treatment of Systemical diseases and manifestations we have developed a special total treatment method, Medisynx Method (MM), consisting of BASIS test and two or more acupuncture treatments. These specific acupuncture treatments are essential to 'reset' your immune system, to restore your homeostasis (balance), soon you become healthy, fit and full of energy again.

To apply for BASIS test, please take up contact with a MM therapist a special Medisynx trained acupuncturist, to find by www.meditestlab.com or contact Medisynx by email info@medisynx.com. BASIS test is an even more extensive Broad Alimentary Screening Immunological Spectrum.

We provide the following BASIS tests:

- BASIS Standard test (to 280 food substances)
- BASIS Plus test (to 375 food substances)
- BASIS Candida albicans (re) test

Every two years we will develop an extra extensive test to more new food substances

Since 14th of February 2009 our patients established their VIDA Patient Platform Foundation, with their own websites to exchange experiences and recipes, please have a look at:

Please take up contact with following GP, physician, clinician, therapist, dietician or healthcare practitioners in your area:

Alimentary Induced Diseases
Medisynx provides a curative and preventive treatment method for Alimentary Induced Diseases, for all of them who are ill due to food

MEDISYNX

Your Diagnostic Laboratory for Immunology

ALIMENTARY INDUCED DISEASE(S)

An Alimentary Induced Disease, is a disease caused by food.

When an Alimentary Induces Diseases is diagnosed, we advise you an individual diet based on our Medisynx blood test, always in addition to your treatment and medication.

*„Let food be your medicine and
your medicine your food”,
as Hippocrates said.*

Which food and nutrients are healthy for you needs to be defined first by our MEDI – or BASIS test. Which of both tests is the best for you is depending on the seriousness of your manifestations.

Based on our clinical scientific research we have developed two kind of blood tests adjusted to seriousness of disease and manifestations:

1. Non-Systemical diseases and manifestations
2. Systemical Diseases and manifestations

NON-SYSTEMICAL DISEASES AND MANIFESTATIONS AND MEDI TEST

Non-Systemical diseases and manifestations are limited to undigested food particles in your gut, causing mild and temporary manifestations. These reactions are not induced by the immune system and can lead to the following gastro-intestinal tract manifestations:

- Hiccup, belching, indigestion, reflex, vomiting
- Nausea, 'stone' feeling in the stomach, gastritis, gastric ulcers
- Diarrhoea, constipation, Irritated Bowel Syndrome
- Appendicitis, malabsorption and deficiencies, dry tongue or throat after eating
- Low energy level, concentration disturbance, memory disorder, mood swings
- Weak immune system and finally to serious Systemical diseases

For the treatment of Non-Systemical diseases we developed our **MEDI test**. The Medi blood test is a broad immunological test to define your food-incompatibilities and its results provide an individual diet for a curative and preventive treatment.

We provide the following Medi tests:

- Medi Standard test (to 280 food substances)
- Medi Plus test (to 375 food substances)
- Medi Candida albicans (re) test

SYSTEMICAL DISEASES AND MANIFESTATIONS

Systemical diseases however are a consequence of severe and long lasting food-incompatibility leading to an increase of permeability of the mucosae of the gut villi into the system (leaky gut syndrome). In that case you have developed one or more Systemical diseases and manifestations, causing a cascade of immunological reactions in the total body and brains.
