

MY TESTIMONIAL

My name is Luci, I am from Spain, and this is my story, translated from Spanish by an interpreter, because it so important to share my results with everybody in the world.

I am a woman, mother of Hector, about who I wrote his remarkable story (Epilepsy, Autism and Spasms) before.

I am 43 years, at this moment, and do work in a hospital, as my husband and I are clinicians, and we were very sceptic about all what is not Western Medicine, so what was not in our curriculum at the university nor published. But we have changed our minds totally as we have seen our remarkable healthresults that changed our lives in totally, please read our testimonials here.

Since childhood I was suffering, I had Trigemius Neuralgia, so severe nerve pains in my face, head and neck, and often migraine attacks, and then I had to stay in bed in a quiet dark room for days, trying to survive, could not eat just drinking water. No medication could releave my pains.

By my brother I heard about Medisynx Method, and have seen his results how he was cured of psoriasis, his skin was totally clean and perfectly soft by an individual diet based on a blood test and only two acupuncture sessions. So remarkable, and as my brother is an academic educated engineer, so not a dumm and foulish man, I instantly knew this is true.

I made an appointment in Medisynx Clinic in Madrid, first they took blood for BASIS Plus Test and after 10 days I got the results and had a consult with their doctor to explain my test results and to search for alternatives to set me on a well balanced diet, hence no risks for deficiencies.

After 3 days of strict diet I noticed some changes yet, my stomach and intestines were better, my faeces (stools) changed into a better consistency, easy going to the toilet though. Although my pain in the face was still there, but much less painful.

After some weeks, there was a waiting list, I had the first acupuncture treatment, and got a lot of needles, 43 needles in total from head to toe. It was quite an experience from the first second on, as after only some minutes I already felt the pain was changing, first the pain did flow out, like it spreaded, and became less heavy like the pain was diluting and the pressure I always felt went away, I even could follow where it was going to, to which needle in particular, so strange but so clear.

Doctor Vink gave me an exact explanation all the time, that gave me so much comfort to know what is going to happen and it did happen exactly what she told me. Finally I got to know where my pains are coming from, how my incompatible nutrients did built up in my intestines year by year and led to Leaky Gut Syndrom (increasing permeability of gut mucosa) and then these incompatibilities leaked into my body and head and was transported by my lymphatic system to areas

where to store these, at these locations it causes blockages and stagnations, my lymph cannot circulate well anymore and pressure builds up and hence my pains. Like a blocked river. So logic in fact.

By placing Stirling silver needles on the right locations she is able to create a potential difference, so more plus, like electricity, in this way she is able to push these stored incompatibilites forward to glandular nodes, then to spleen, then to exits of the body by liver-colon and urinary tract (kidneys and bladder). That means I will bring these wastes to the toilet after. Incredible and so logic.

Since this first acupuncture I had no Trigemius Neuralgy and migrain attacks anymore, unless I made a mistake and felt the reaction immediately. As at home I can carry out my diet perfectly, but in restaurants it is a risk, as not everybody takes my diet seriously though. Diets of glutenfree or peanutfree they do know, but if you cabnnot have tomato, no carrots, no parsley, no black pepper and no garlic that is so NOT-Spanish, so standard in our kitchen.

When I went back to that particular restaurant to tell them my sad story, what happened after they have made some mistakes in my meal, they were shocked and promessed that they will take me seriously and so it happened. As joining a meal with family and friend is our way of life, so I do not want to stop going to. Better to put my energy to explain all, in this way we make the world wiser.

In our hospital I tell it around, some follow up my advise and became convinced themselves, but unfortunately from many

of our colleagues we encounter only derisive laughter or they place it under coincidence, spontaneous cure or even dare to say it is placebo. They even ignore a scientific solid study and its publication. How shortsighted!

We strongly try to implement this effective treatment into our hospital, as we want to become better doctors so that we can help more patients.

We owe doctor Vink and her Medisynx Team a lot, we are so grateful for what she has achieved, we admire her knowledge and her strenght and power to continue to go against the stream, her time and energy to share all her knowledge with us and all her other patients, as she is able to explain all even in simple words.
