

My honest story

I am mother of a now 8 years old child, who was severely ill since he was born, he had epilepsy and spasms, and was diagnosed for Autism Spectrum, his name is Hector. My story is translated as we are Spanish as our story is so special.

After this story I will write down my story, also such a special story.

My husband and me are clinicians working in hospital in Spain, we do have three children and our story is about the youngest.

Our son Hector had attacks since he was born, sometimes even 3 or 4 attacks a day, had severe spasms and retardation of development, we thought that it was caused by his epileptic insults. We did not notice any reaction, he did not react to our contacts nor speaking, but we tested he was not deaf. We had no interaction with him, he looked around without seeing, he did not make any sounds, sometimes he cried softly but we did not know why. No emotions, no expressions, no smile. On bases of EEG and scans we diagnosed Autism too.

I took care for him, gave him babymilk by a baby bottle, as he could only suck and could not eat from a spoon, changed his dipers and put him from bed to a babybox and that was his life until he was 5 years old. He could not sit, did not roll, and his muscles were rigid (stiff) and I said I do not have a child but a plant. Sounds tough, but this is how it was. We consulted many doctors worldwide, but no expectations was their conclusions. His medication for epilepsy were not quite effective, as his insults kept on going.

In our family many were treated in Medisynx Clinic in Spain and we saw their remarkable results in health in so many different disciplines, that we asked this clinici if they can help us and their

answer was yes we are almost sure we can, as they have treated many patients with epilepsy before, so suggested that we will carry out 1 treatment and then we will see. Although we were sceptic, because we are educated in Western medicine, we made an appointment as what do we lose and what can we gain?

Hector was 4 years at that moment, and first we did plan a blood take, to receive his individual diet of incompatibilities: BASIS Plus Test. Hector was on his diet for 3 weeks when we had first acupuncture treatment, as there was a waiting list.

Doctor Vink took her time to explain us all, about what we can expect what will happen, as when the needles are in it will promote to collect and excrete waste products in the body and brains by his lymphatic system. These waste products are rests of incompatibilities, stored in his body and brain since he was born.

By her special form of acupuncture she can excrete these waste to his spleen and water-soluble waste by urinary tract and non-water-soluble waste by his liver and large intestine, so to outside. Step by step his head will be cleaned and he will 'awake', she explained. As like he was in a kind of coma, but that awakening can come with heavy emotions, she prepared us for this moment. What we need to do then, that she can place extra special needles to relax and to downwards his emotions and that we need to give him some sweet drink, to comfort him to become more easy. After we knew what to do, she started the treatment in all confidence.

And this is exactly what happened, he gave no reaction and stared into nothing, by placing the needles, and after 20 minutes he started to move softly with his fingers, then his hands and then he turned his head to doctor Vink and gave a small smile, we were stiff of emotions, this is incredible emotional. He put his hand to doctor Vink and tried to touch her face so softly, but had not enough control to his movements. Doctor Vink took his hand softly and directed his hand to my face and said come darling touch your mama' and papa'

face. Our tears runned over our cheeks, what is this amazing. Hector was so relaxed, like he woke up from a long lasting sleep. Goose Spoons and by far the most beautiful moment in our lives. So special!

Yes and then we were convinced, we saw all with our own eyes.

Since this acupuncture treatment Hector did not have an epileptic insult, only once when my mother, his grandmother gave him a piece of a biscuit and he may not have wheat and no vanilla. My mother felt so guilty, but she wanted to spoil him a little it. Instantly he needed an other acupuncture treatment urgently, fortunately doctor Vink could make time for us.

Hector was treated every month, to improve his muscles and tendons development and to promote his speach, as in his body and brains he was still a newborn baby. Doctor Vink has developped a special treatment for fysiotherapist and programm for logopedia, to start up making sounds, first mmmm sound. Later to ma ma ma ma ma sound. Slowly we build up sounds as basic for words. We practised symbols, symbols for eating, drinking, sleeping, to communicate with him- And that alone was so special, now he could tel lus what he wants and needs. Step by step he learnt more symbols as water, juice of an apple or clemantine, a slice of bread and later of activities and emotions. He seems tob e an intelligent child, he was driven to learn. Soon he could sit, stand, walk, bent forwards and improved his fine motoric movements rapidly.

After 6 months he was able to go to kindergarden school, first half an hour as it is so important to develop his social skills too. He is doing great, more then we ever could expect.

He loves animals, went to farmers as animal do react very well on him, like they have a special form of communication, body language. Step by step we were able to reduce acupuncture treatments o zero, in 24 months.

At this moment Hector is 8 years, he rides a horse, is fantastic in school, he is intelligent and a social child, he develops rapidly. And no more epilepsy attacks anymore. We are happy parents and proud of him and would like to do all to get this Medisynx treatment method implemented in our hospitals, but we get only resistance when we even dare to mention these results or try to bring our results under attention of our colleagues or direction.

I have tried to be as detailed as possible, by writing up all-in a diary book and want to share your knowledge with you, as health is most precious.

We do have so much respect for doctor Vink, for her intelligence, for her power and courage and drive to go on, although all resistance. She is a loving, caring and integer person, who stands up for truth in science. Her answer is just as simple as powerful 'I do work for healthcare and wellbeing of my patients, despite the outer world thinks and does, or industry dictates', well that says all.

We are grateful and proud that we met her and will support her in all we can.

We also made a video, to record our story and support her to publish Hector's and my results, for the future of our children, her knowledge and this method has to be brought over to next generations.

Doctor Vink does provide Post Graduates, why there is no more interest? Her acupuncture is based on science, it is not about spiritual vague issues, but only about an instrument and high level of needling-skills and technique, to achieve most remarkable results.

For her also acupuncture is pure science, it is all about lymphatic system and lymphatic organs, by creating a potential difference only by using Sterling silver (525 Karat) or real golden needles you are able to promote circulation of lymph and lymphatic system and thus of blood vessels and all organs, tissues, bones and joint.

She translated rare words as - ying en yang and meridians – to western words, to – water (lymph) and power circulation and of energy and lymfatic system. So that we do understand what it is and what it does. I admire her for her knowledge and talent to bring it over to everybody.

Later I will also write down my own story, trigemous neuralgy and incredible story of my father, he suffered from cataracta, glaucoma and blindness due to inflammation of his eye nerve, he was blind for more than 20 years yet, but..... now he can see with both eyes!

Lucy and son Hector
